

DATASHEET

Sage Inventory Advisor

Make better inventory decisions

Benefits

1

Minimize stock-outs increase, sales and keep your customers happy

2

Reducing your excess inventory allows you to grow your business by investing your cash in other areas

3

Integration with Sage removes manual processes, saving you time and enabling you to place orders, plan and forecast quicker, smarter and with more accuracy

4

Pricing is based on a company's inventory value, making this an affordable solution for any size of business

- Reduce stock-outs and excess inventory, so you can optimize your working capital. Customers see a reduction in inventory size of between 10% and 25%.
- Increase customer satisfaction by having the right products on hand to sell when you need them and improve customer retention.
- Save time on ordering and spreadsheet management, leaving time to manage inventory more effectively.
- Save money by improving forecasting visibility and fill rates, and make better planning and purchasing decisions.

“I’m not sure which is costlier, overstocking or understocking. But I don’t worry about either any longer. Sage Inventory Advisor give us the information we need to ensure we have exactly what we need in precisely the right quantities. It would be difficult to run this business without it.”

Mike Ellery, President – Warwick Hanger

Solution

Sage Inventory Advisor (SIA) is a cloud-based inventory management tool created for small to mid-sized companies. SIA was developed to extend the functionality of your Sage ERP by allowing you to classify items, forecast, order and procure your inventory using intelligent data.

The monthly subscription fee is calculated on the customer's inventory value, making Sage Inventory Advisor an affordable solution for any size of business.

We do not tie our customers into annual contracts, so they are free to cancel their subscription at any time.

Professional onboarding and training

After the implementation process is complete, all Sage Inventory Advisor customers go through a formal onboarding process that consists of online instructor-led training.

Within the app we have tours and tutorials that can be viewed as required and our support staff are simply a click away.

“We managed to complete the implementation of Sage Inventory Advisor in March 2020; just in time to help with the challenges we faced. We had already put certain mitigations in place, so when the increase in demand hit us as COVID-19 began and our products, particularly in the tracheostomy range, soared, we were better positioned to manage our supply to meet the increased demand. Being able to see the potential stockouts was key, and we could react to that quickly. We would see if we could pull orders forward or do what we could with our suppliers and get our product in much quicker than we would have been able to before using Sage Inventory Advisor.”

Luke Timney, Supply Chain – Kapitex Healthcare
